

EcoWatt

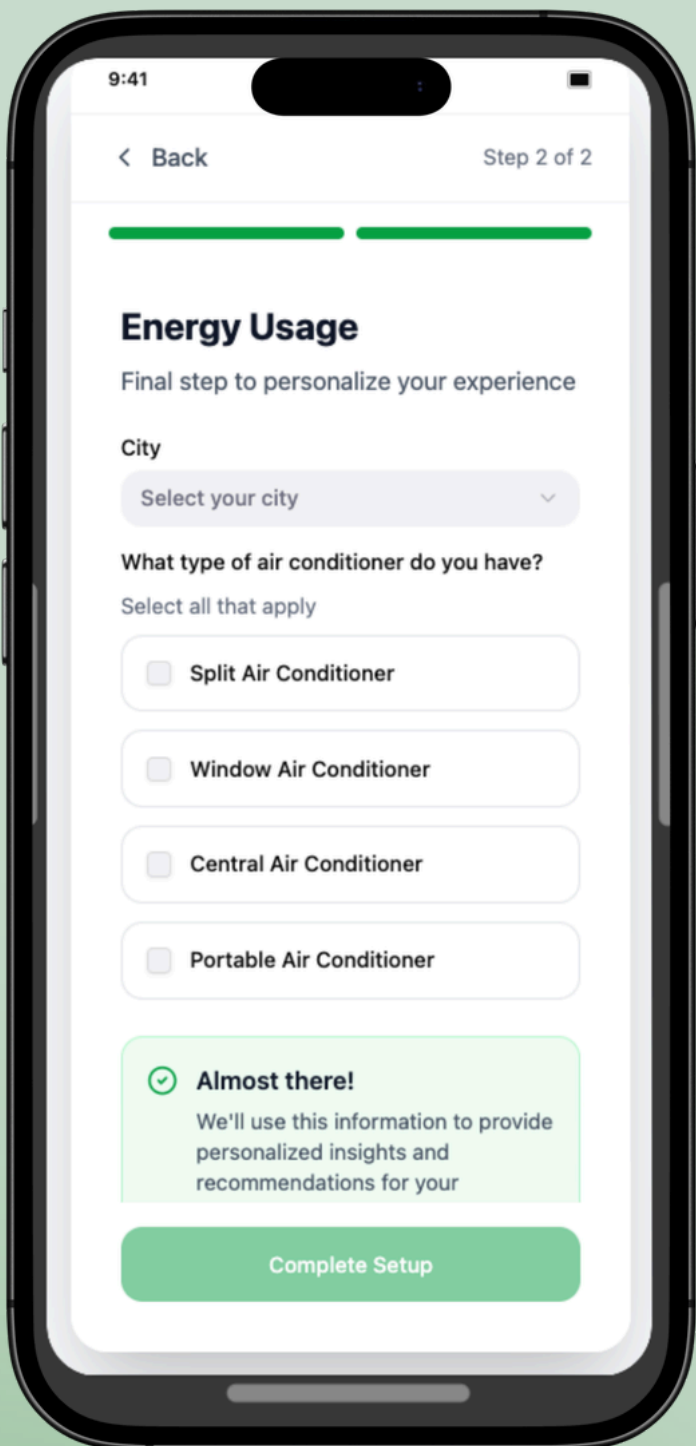

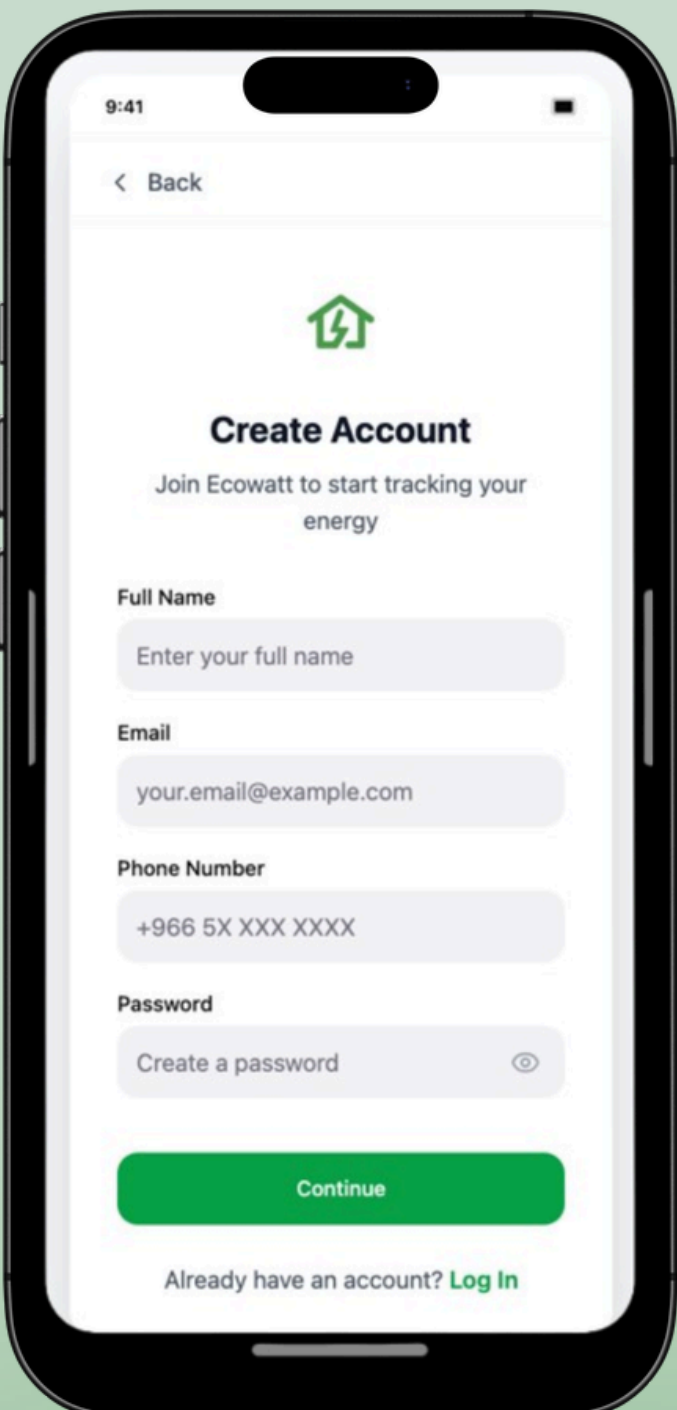

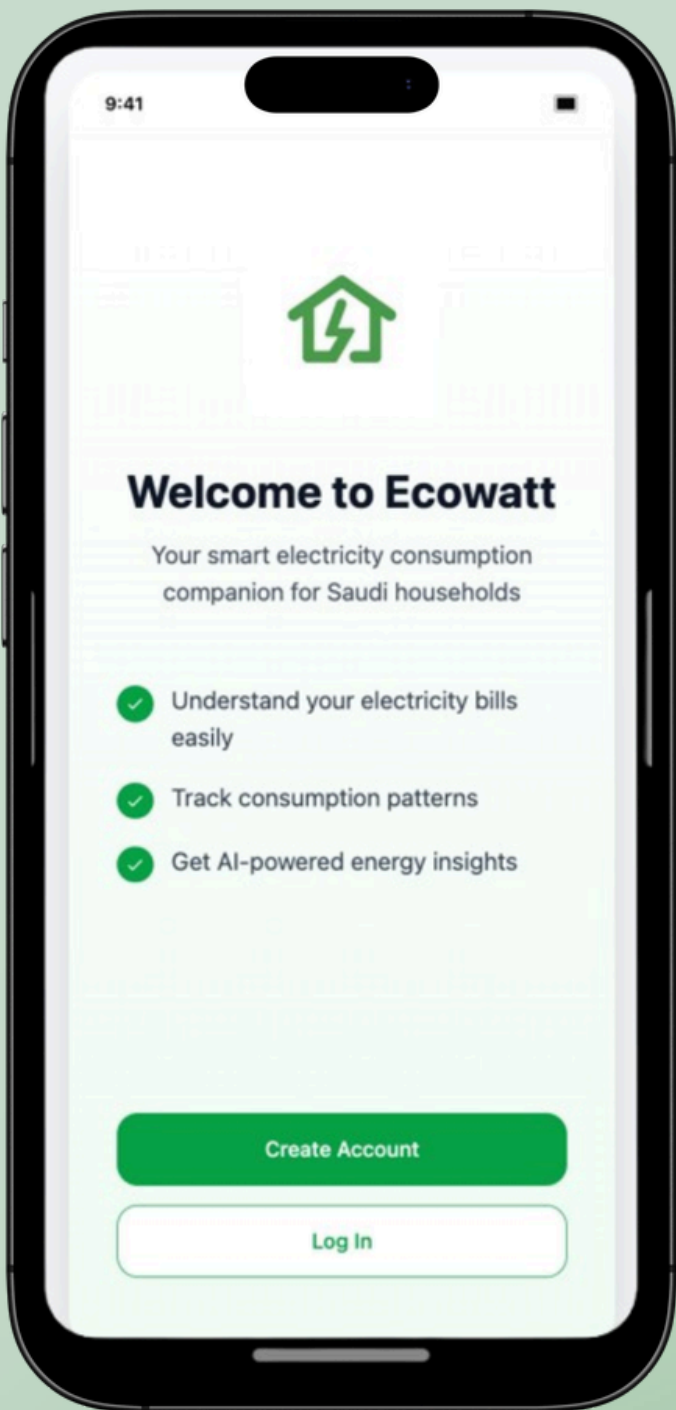

Prototype Walkthrough

Ecowatt is a smart electricity consumption companion designed specifically for Saudi households. While the official **Alkahraba** app handles essential account management and bill payment, **Ecowatt** goes a step further. It's as your personal energy coach.

Our prototype demonstrates how we transform passive billing into active savings through:

- **Personalized onboarding** that captures household details (housing type, family size, insulation) to tailor insights from day one.
- **AI powered recommendations** that shows an approximate of how much you can save, in SAR, by adjusting small habits.
- **Consumption tracking with context**, including a green line projection that visualizes the impact of following our advice.
- **Progress motivation** that celebrates every action you take toward reducing energy waste.

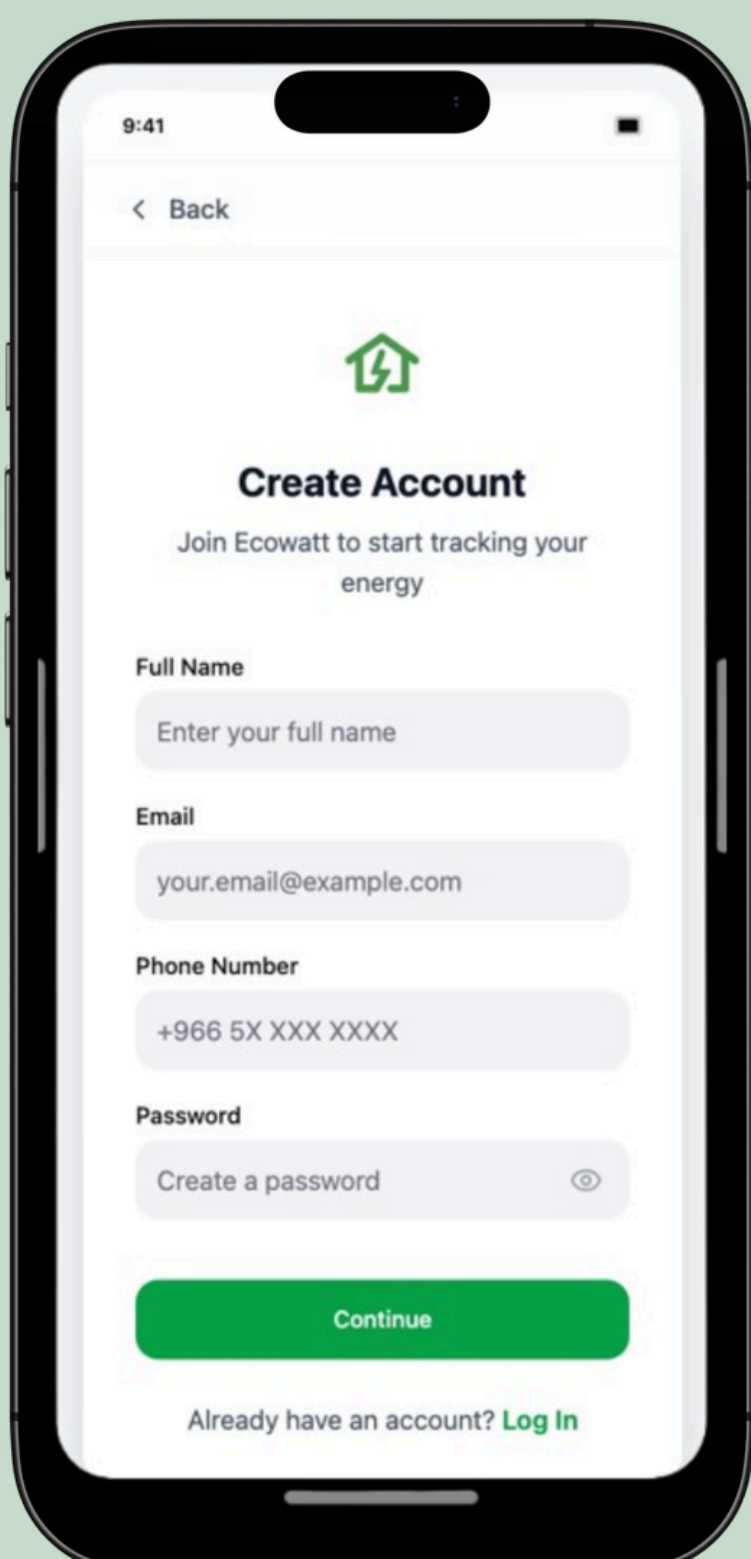

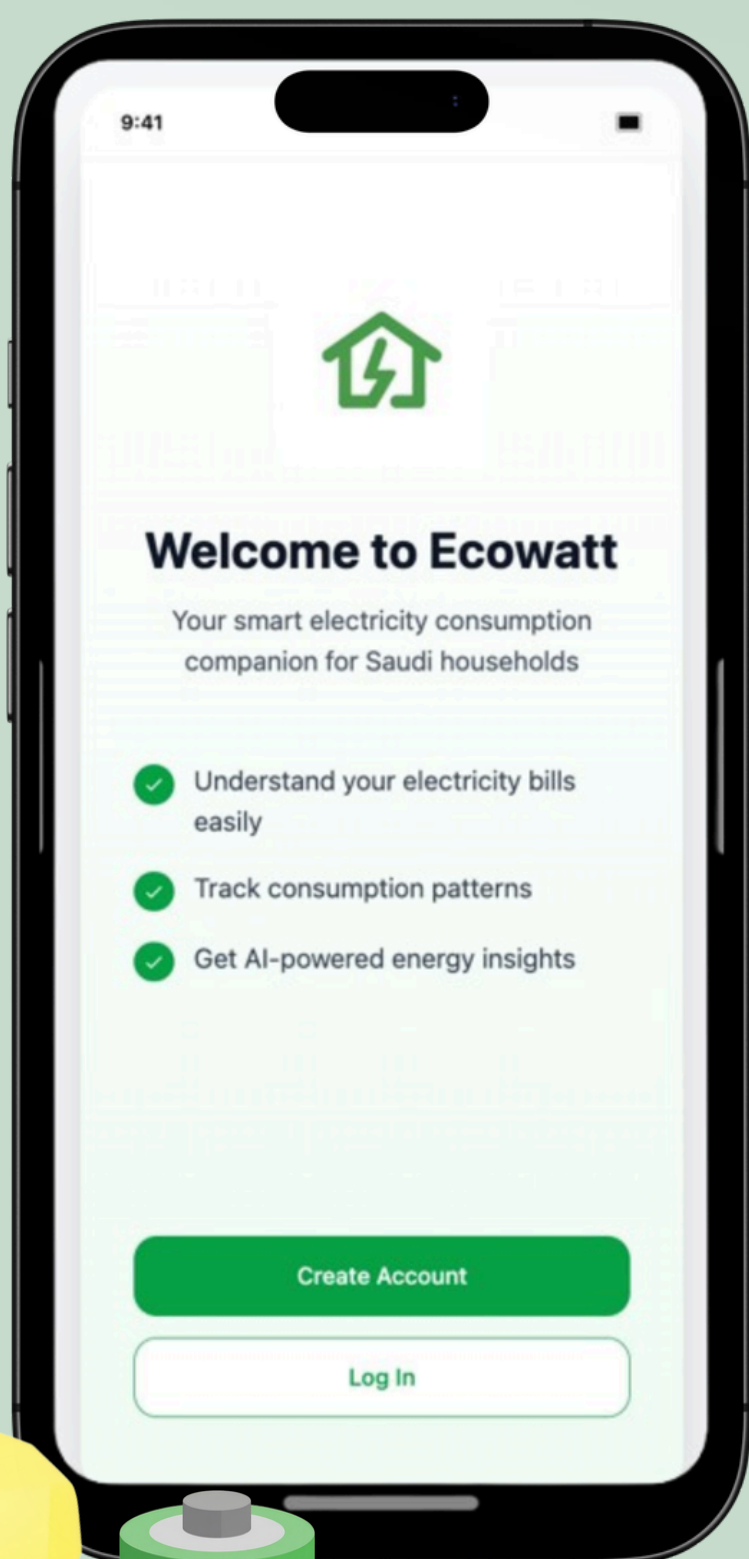

This walkthrough showcases the complete user journey: from account creation and household profiling, to bill tracking, personalized advice, and visual progress comparisons. Each screen is designed to make energy saving simple, actionable, and rewarding.

EcoWatt

Prototype Walkthrough

Welcome Screen (Onboarding):

The entry point of the app.

- Introduces the app's purpose: helping Saudi households understand and manage electricity usage.
- Highlights key features: bill tracking, consumption insights, and AI-powered energy advice.
- Two clear actions: **Create Account** (for new users) or **Log In** (for returning users).

What Makes Ecowatt Unique: Unlike basic utility apps, we immediately set expectations for personalized coaching, not just bill payment.

Create Account Screen (Sign-Up Form):

The first step in the registration process.

- Users are prompted to enter:
 - Full Name
 - Email Address
 - Phone Number (pre-filled with Saudi country code +966)
 - Password (to create a secure account)

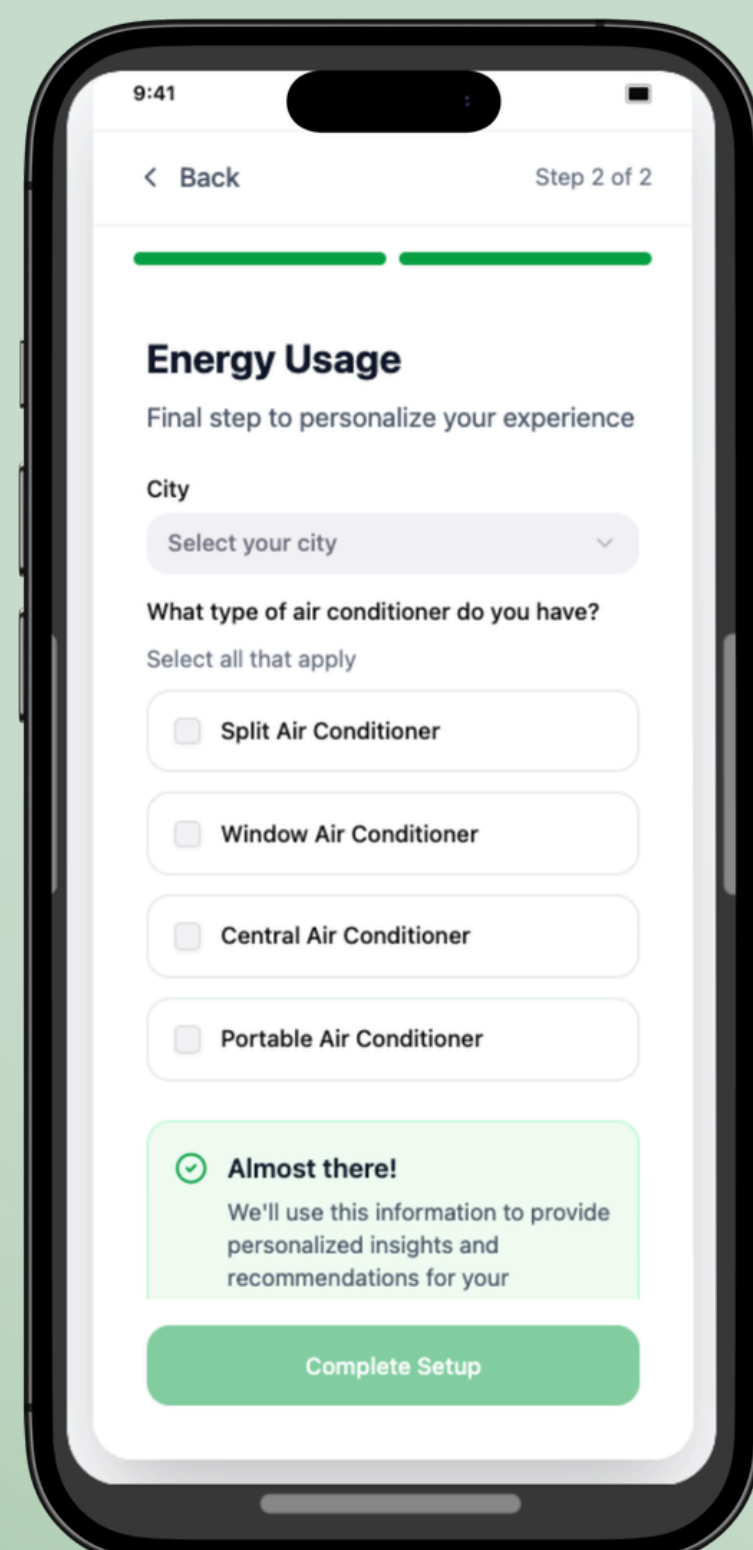

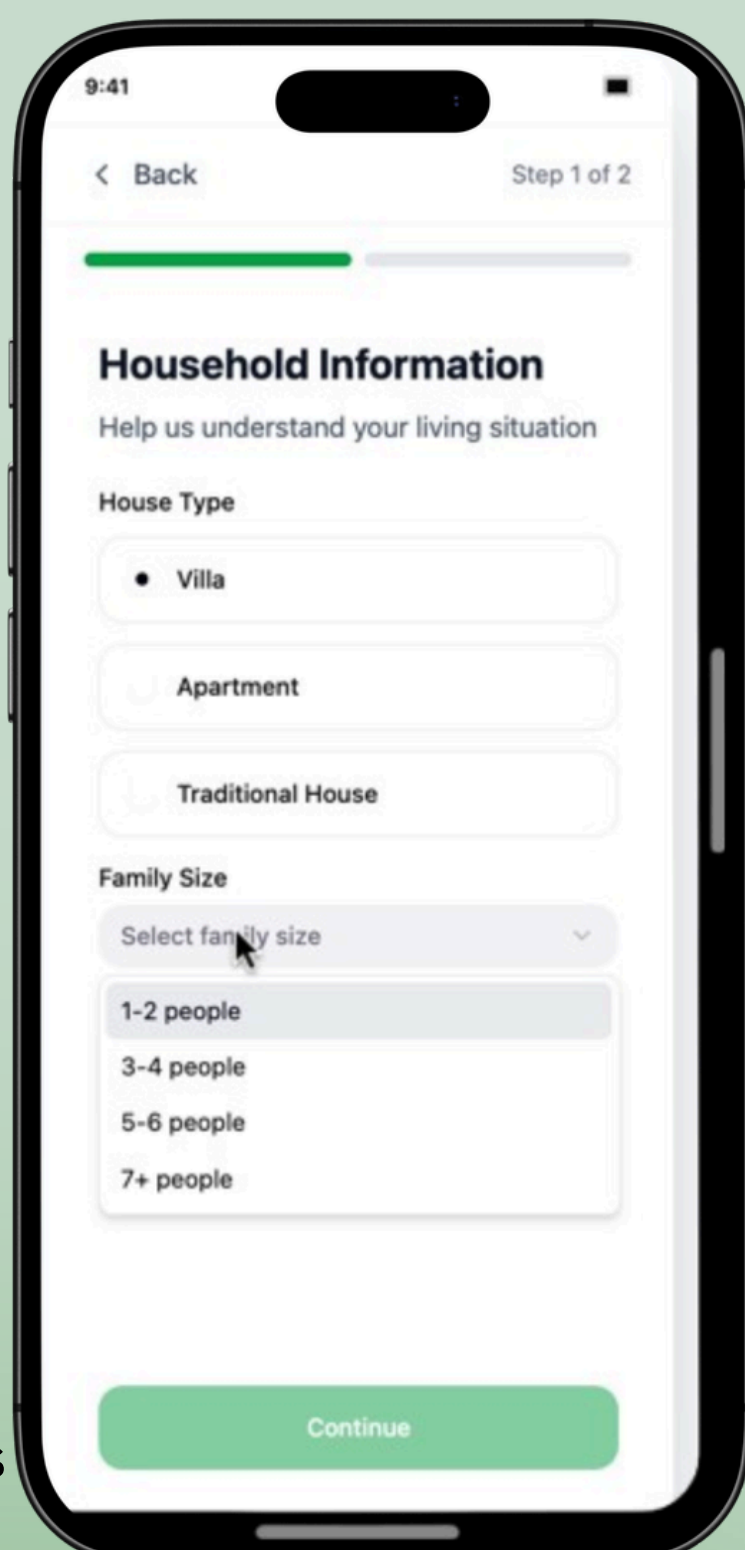

Household Information Screen (Step 1 of 2):

After creating an account, the app collects basic household details to personalize insights.

Energy Usage Screen (Step 2 of 2):

A Continue button moves the user to the final step to collect region and air conditioning details.

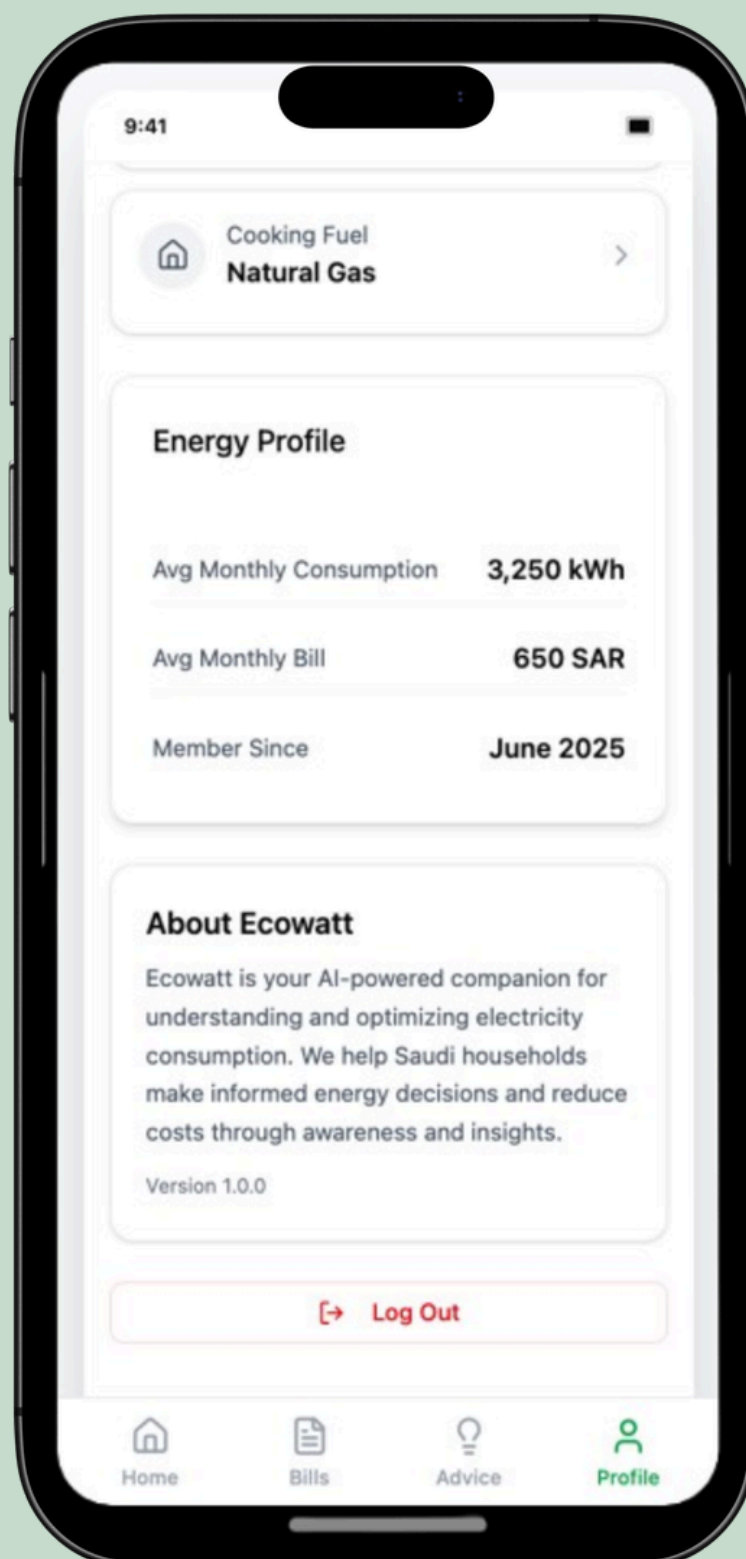

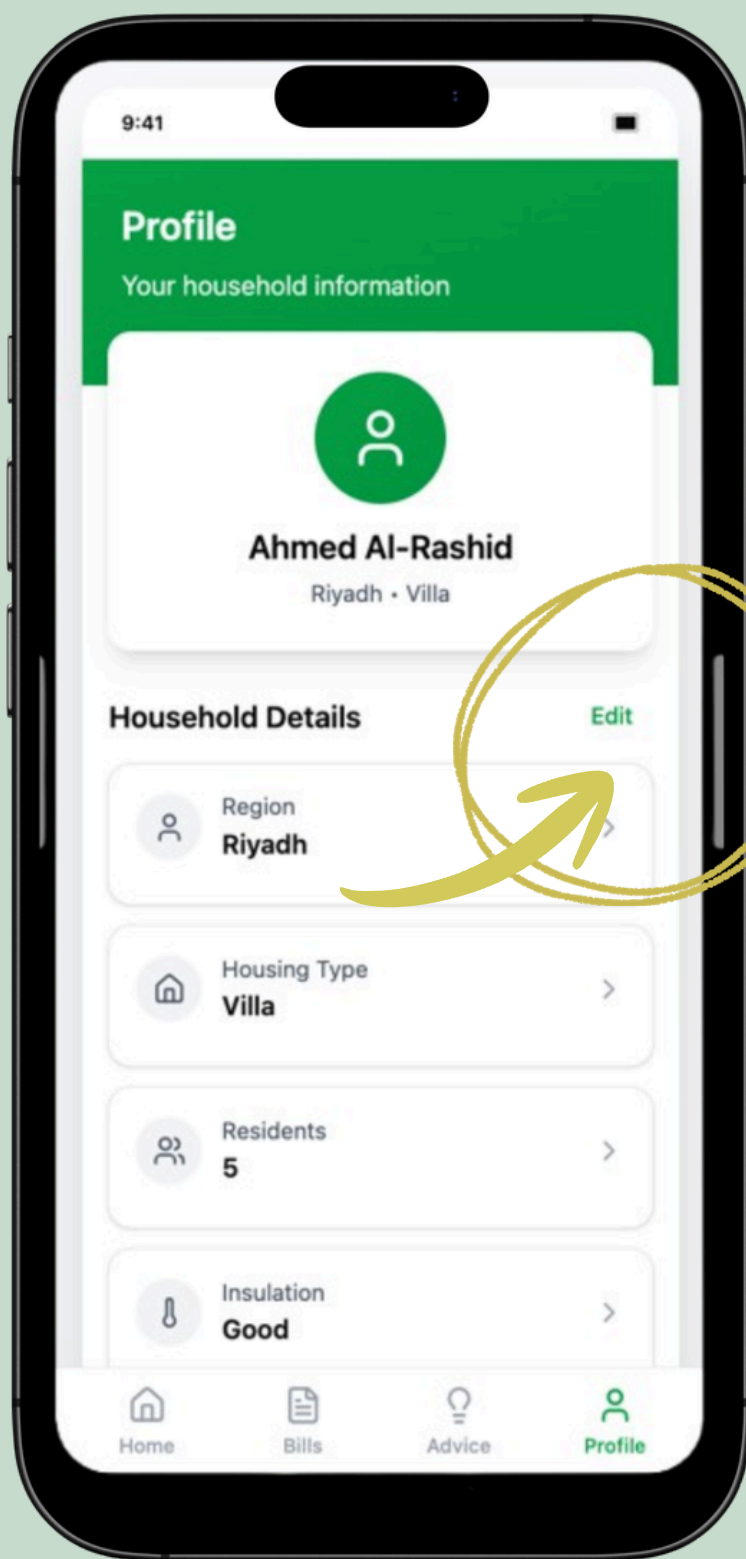

What Makes Ecowatt Unique: This detailed household profiling ensures that every recommendation we make is tailored to the user's specific living situation from day one. **Alkahraba** doesn't collect this level of personalization during onboarding.

EcoWatt

Prototype Walkthrough

Profile / Household Info Screen:

Displays the user's profile, household details, and energy profile.

- Users can edit these details to personalize energy insights.

What Makes Ecowatt Unique: User's profile isn't static. As your household changes, you can update these details and our AI recommendations will adjust accordingly.

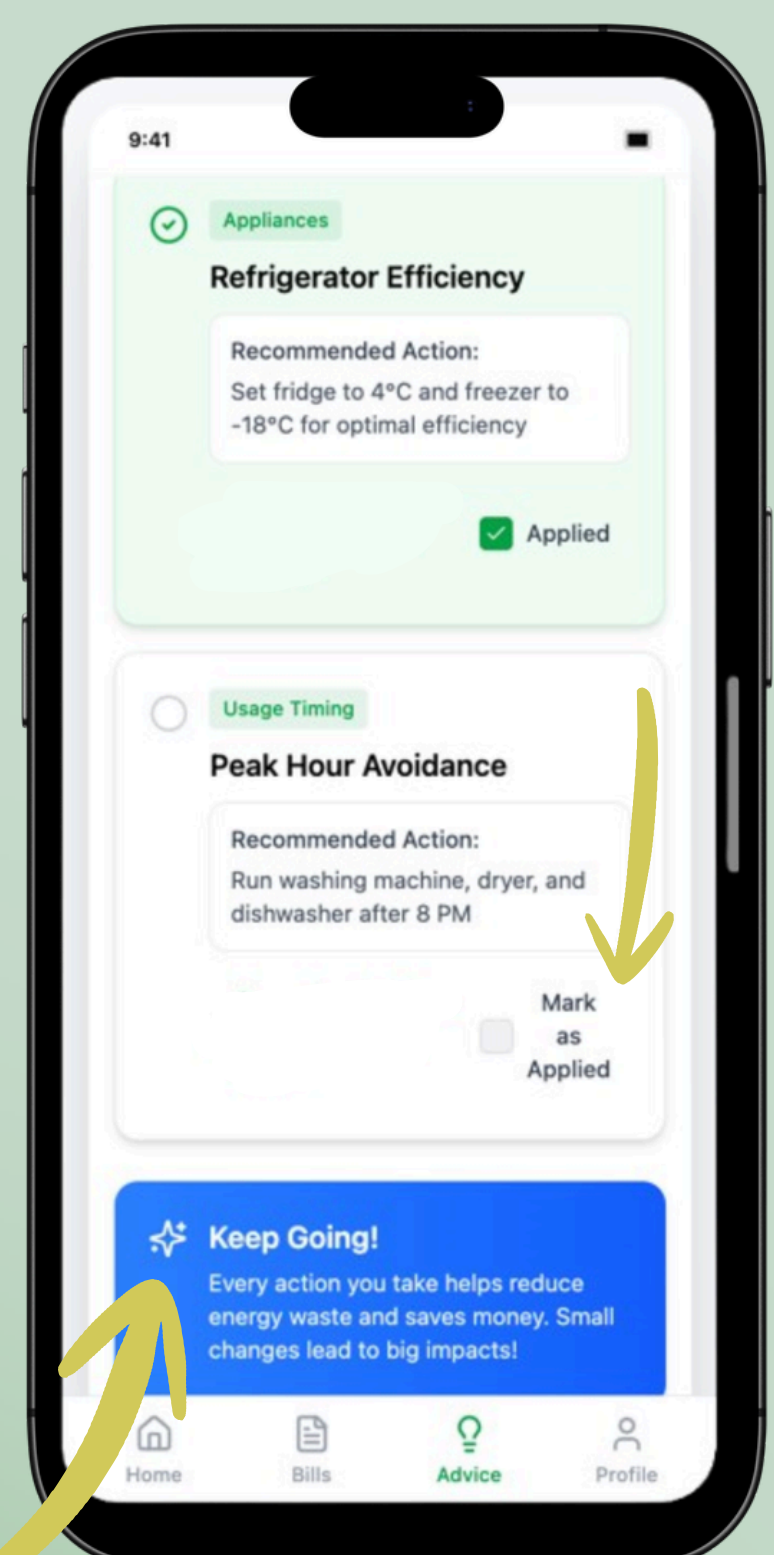

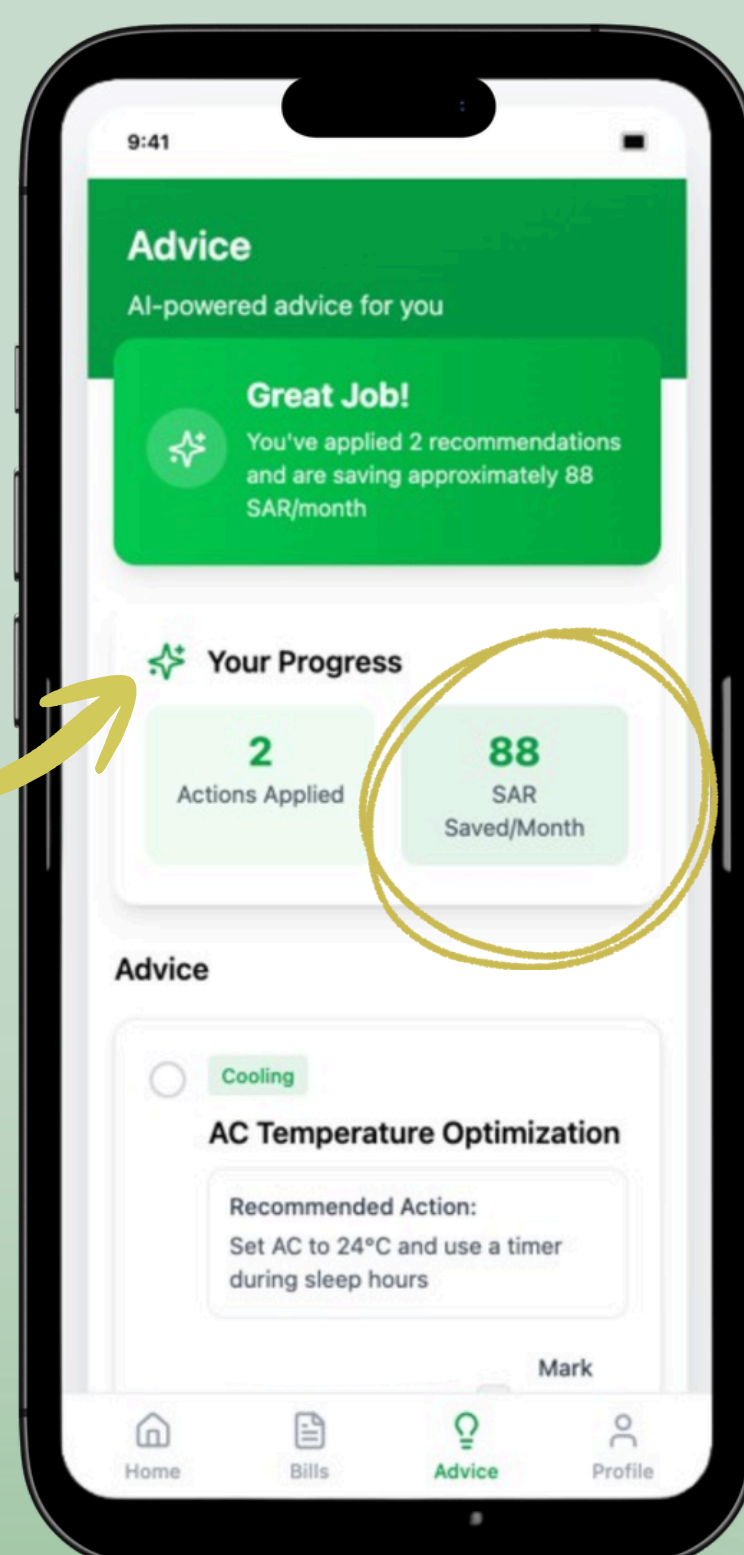

Advice Screen (Energy Tips):

Personalized, actionable advices like:

1. Refrigerator Efficiency
2. Peak Hour Avoidance

- Users can mark tips as "Applied" to track progress.
- Motivational message: "Keep Going! Small changes lead to big impacts."
- Progress tracker of actions applied and money saved comparisons from past month's bill.

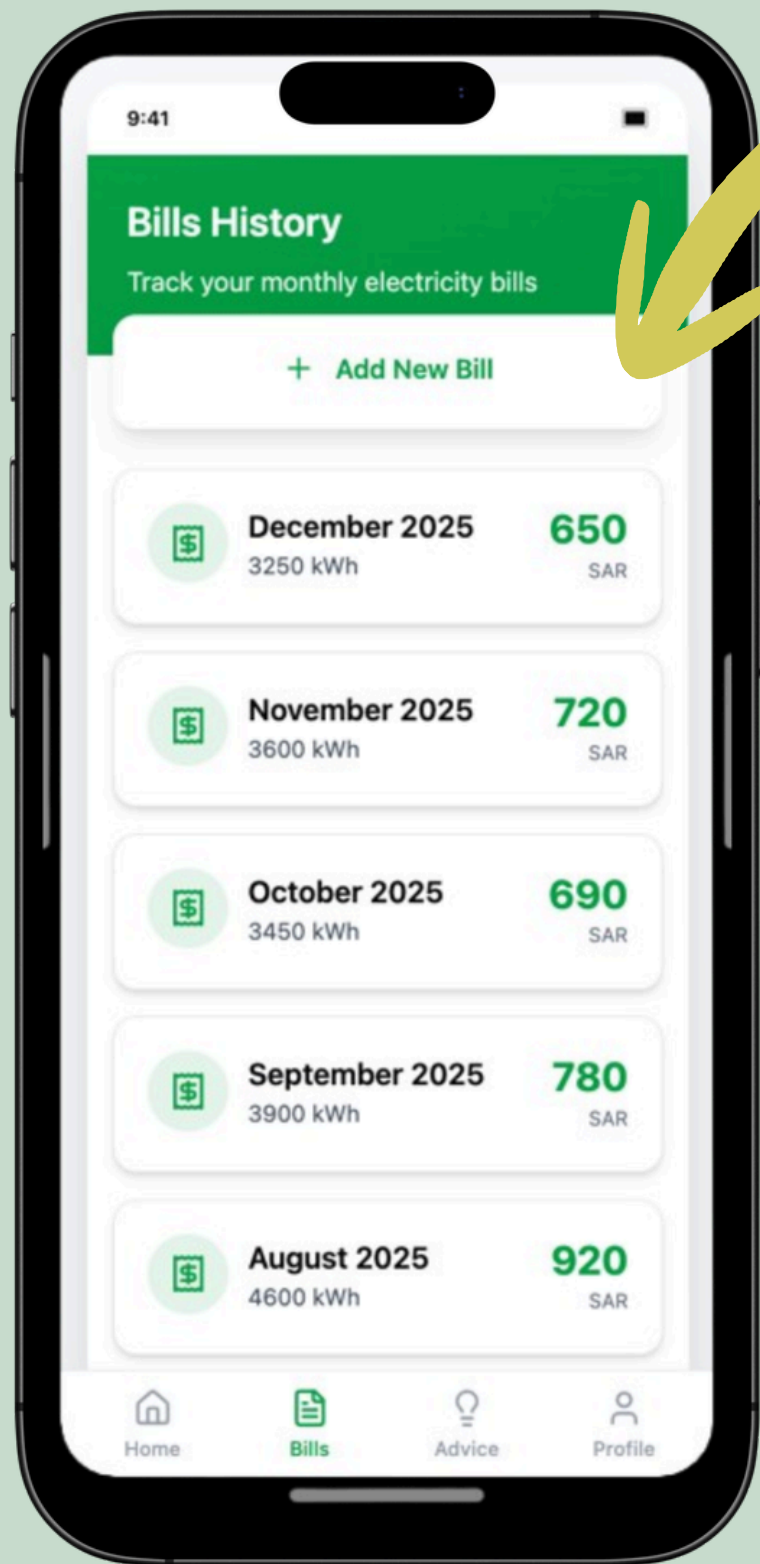

What Makes Ecowatt Unique: This is where we shine. **Alkahraba** offers general tips. **Ecowatt** delivers AI-powered advice tailored to users' households. Users can track what they have applied for and see their cumulative savings grow.

EcoWatt

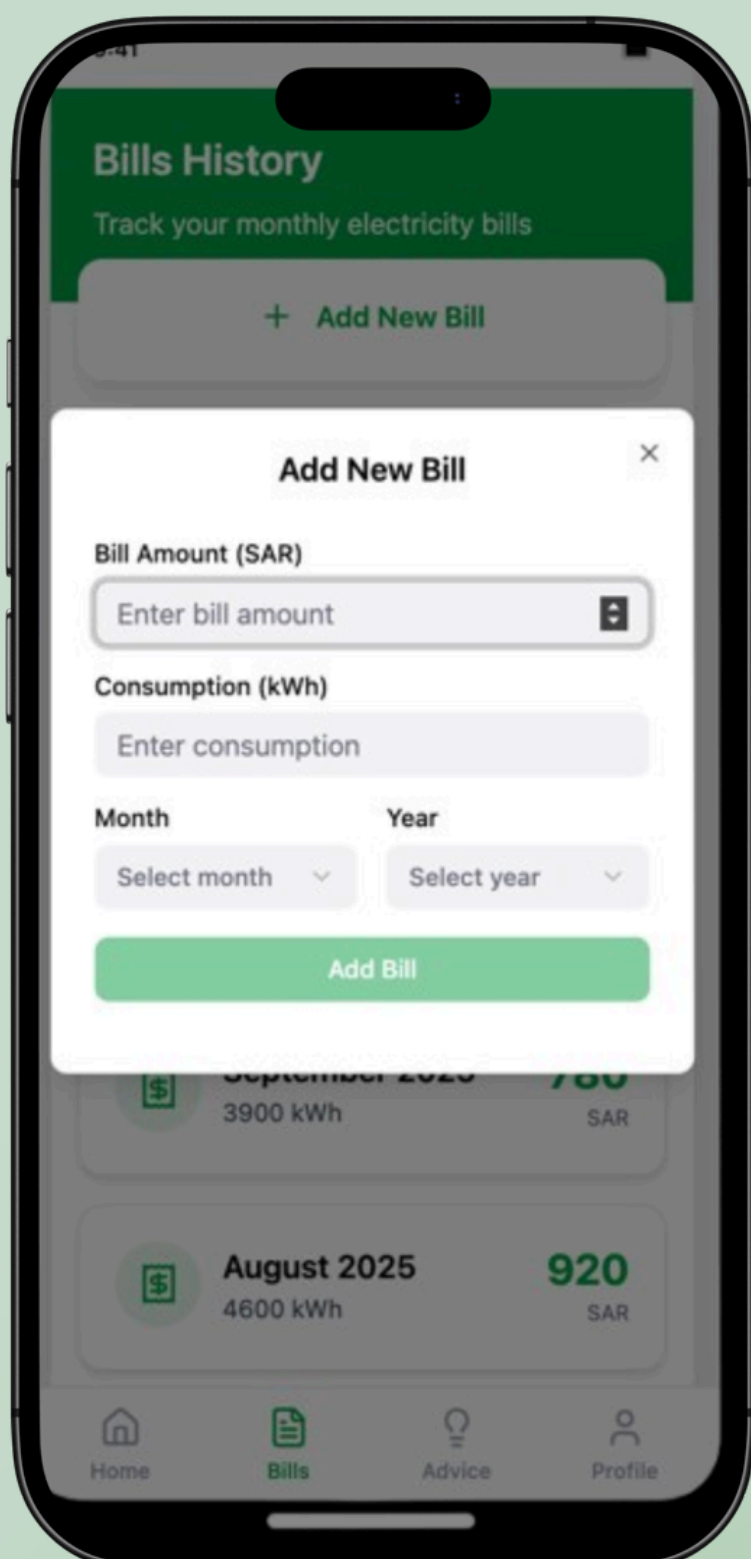

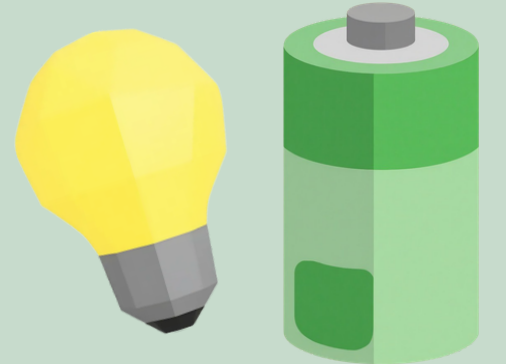

Prototype Walkthrough

Bills History Screen :

Shows a list of past electricity bills.

- Each entry includes: month, kWh usage, and cost in SAR.
- Users can add a new bill manually.

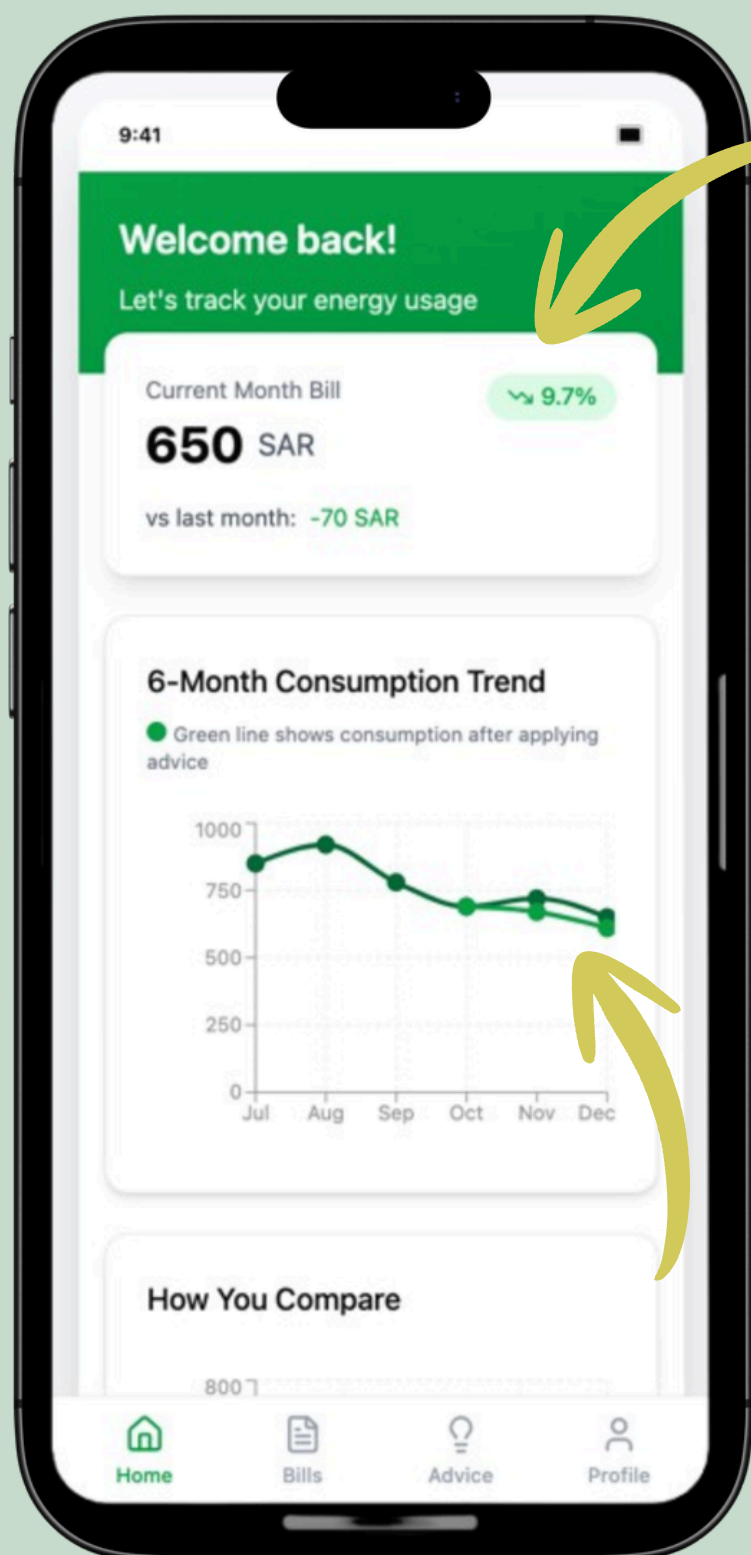

What Makes Ecowatt Unique:

Beyond just listing transactions, **Ecowatt** help you understand seasonal patterns and why users bills change across months. This context turns historical data into actionable insights.

EcoWatt

Prototype Walkthrough

Home / Dashboard Screen:

The central hub of the Ecowatt experience, bringing together all key insights in one place.

Top Section: Current Snapshot

- Displays current month's bill (650 SAR) and comparison to last month (-70 SAR).
- Shows a **9.7% savings** badge, immediately communicating progress.

Middle Section: 6 Month Consumption Trend

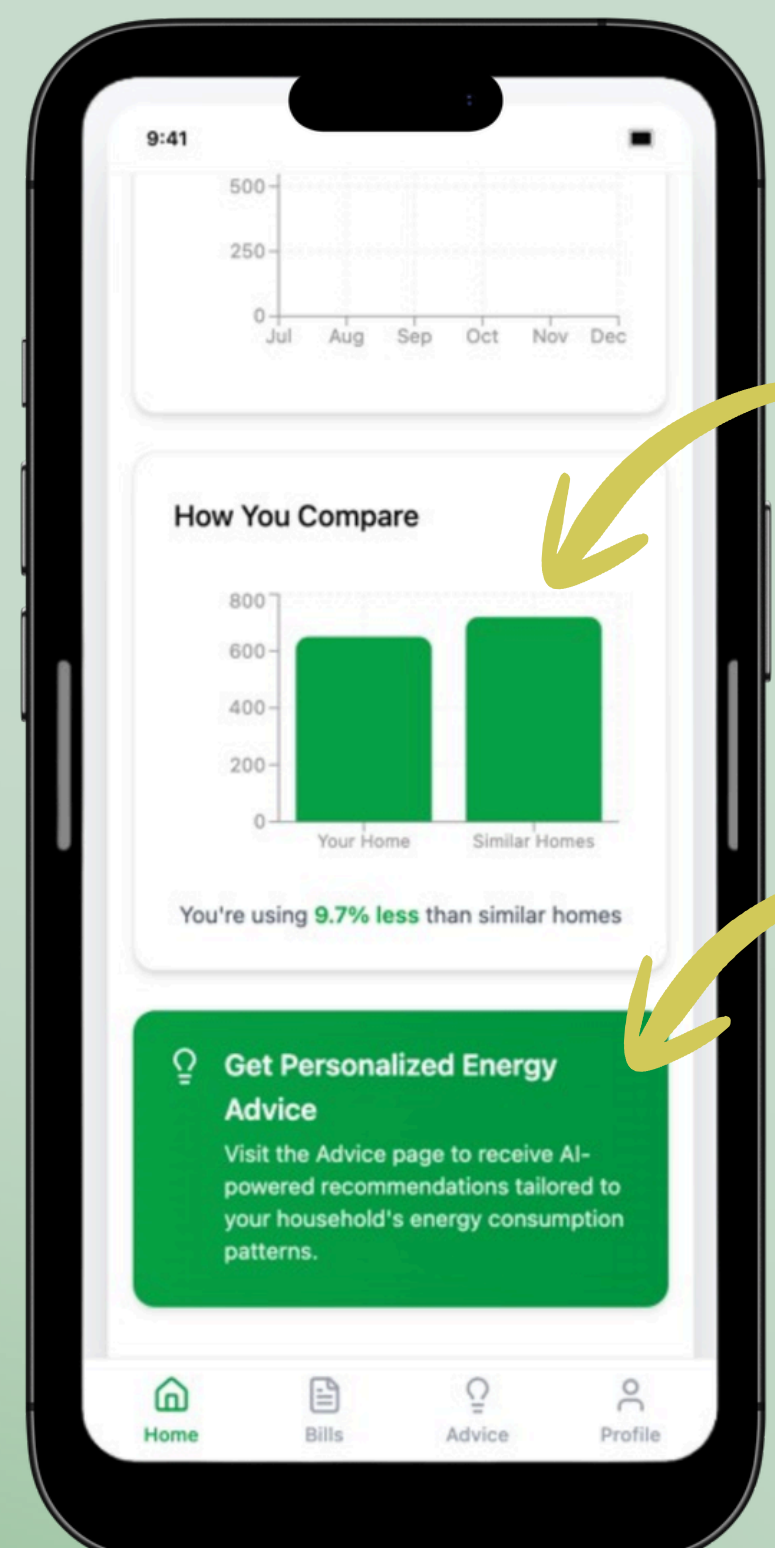

- Visual chart showing consumption from July to December.
- Includes a **green line projection** showing estimated savings after applying Ecowatt's advice.
- Users can literally see the gap between their actual usage and what they could save.

Bottom Section: How You Compare

- Bar chart comparing **Your Home** vs. **Similar Homes**.
- Reinforces the message: "You're using 9.7% less than similar homes."
- Clear call to action: "Visit the Advice page to receive AI powered recommendations tailored to your household's energy consumption patterns."

What Makes Ecowatt Unique: This single screen encapsulates everything that sets us apart. The green line projection gives visual proof that your actions make a difference. The comparison isn't generic, we compare you specifically to homes with similar characteristics. And the clear savings percentage motivates continued progress. **Alkahraba** offers basic monitoring, but not this level of personalized forecasting, fair comparison, and actionable motivation all in one place.

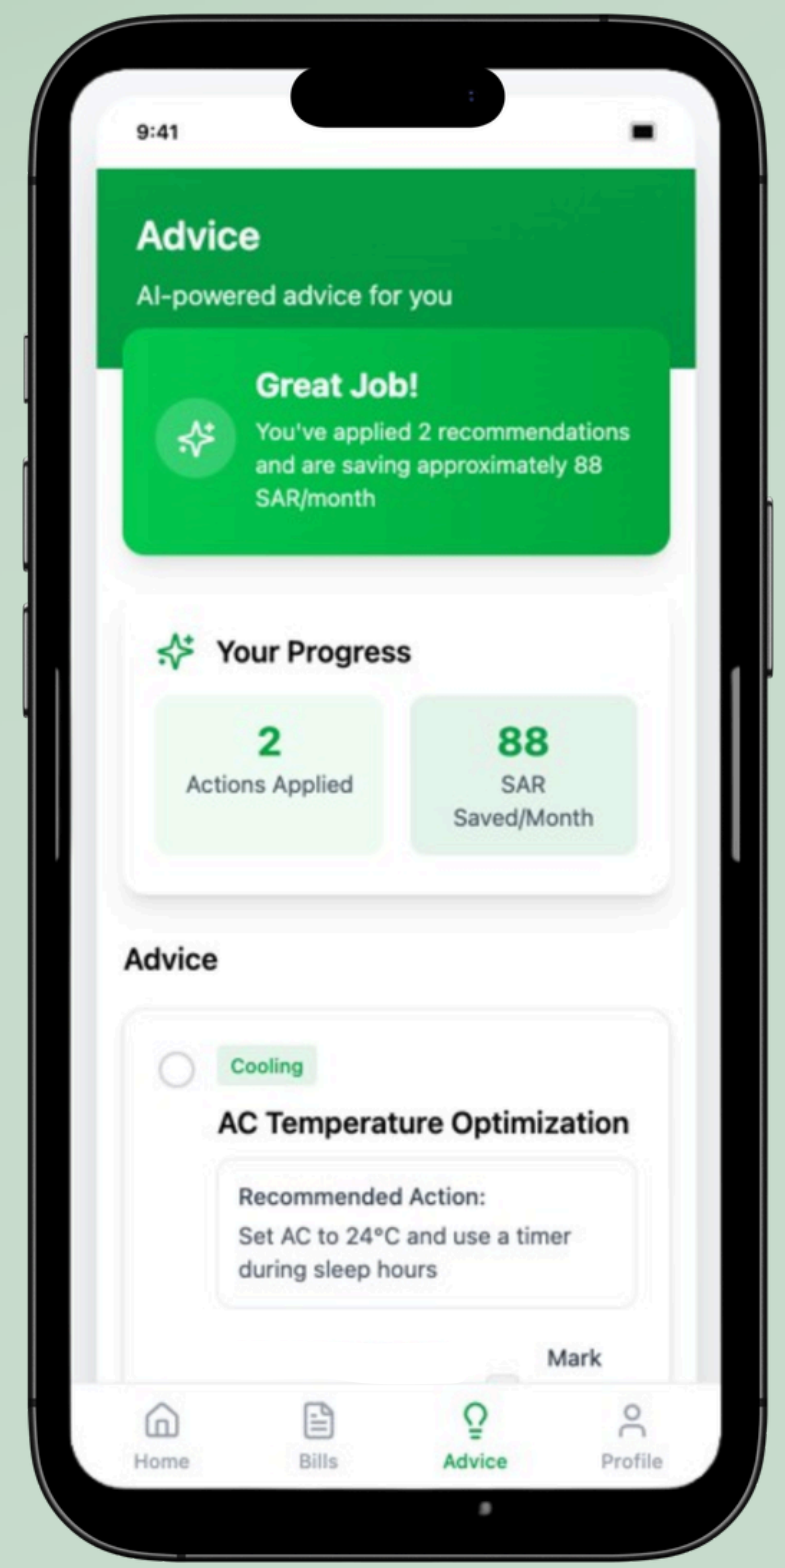

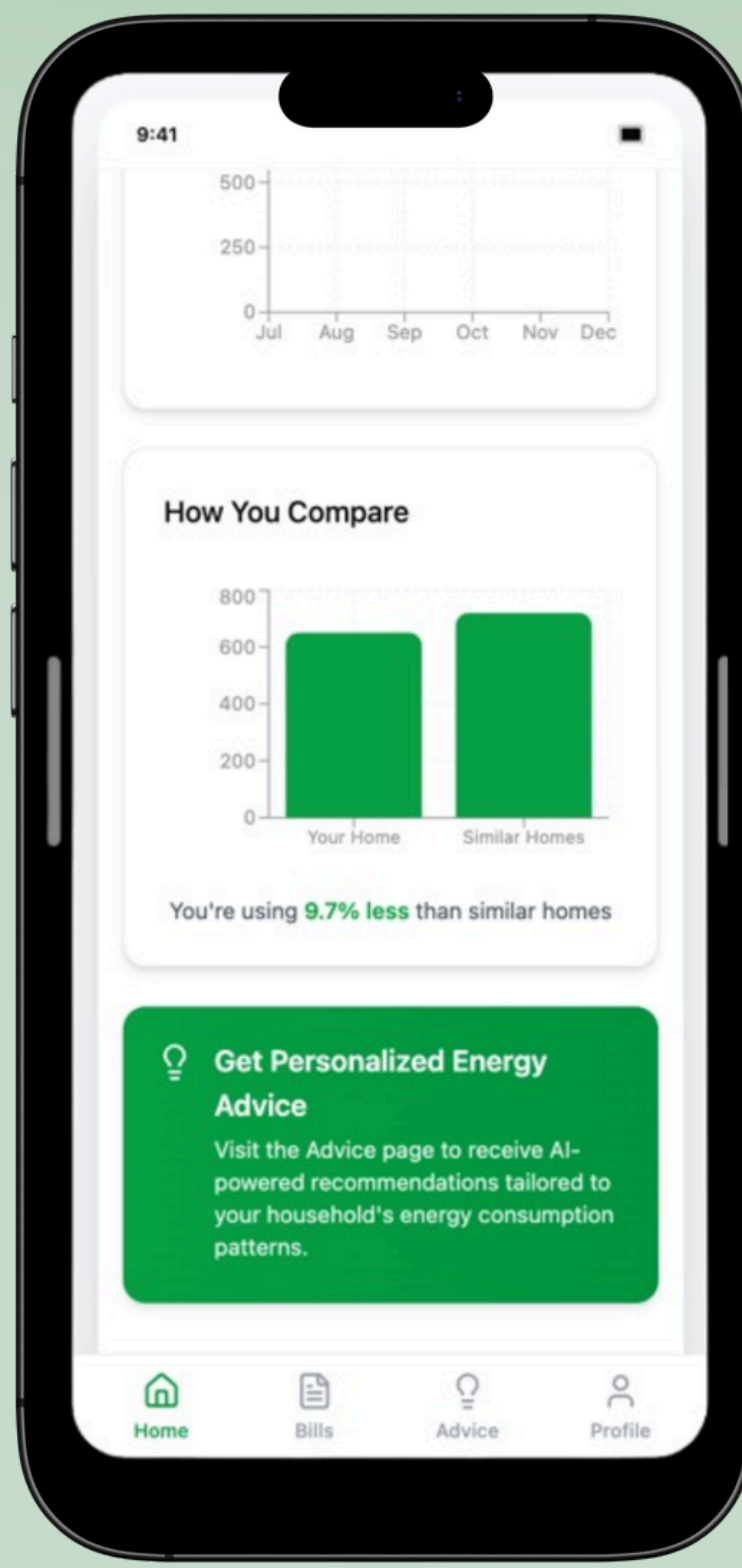

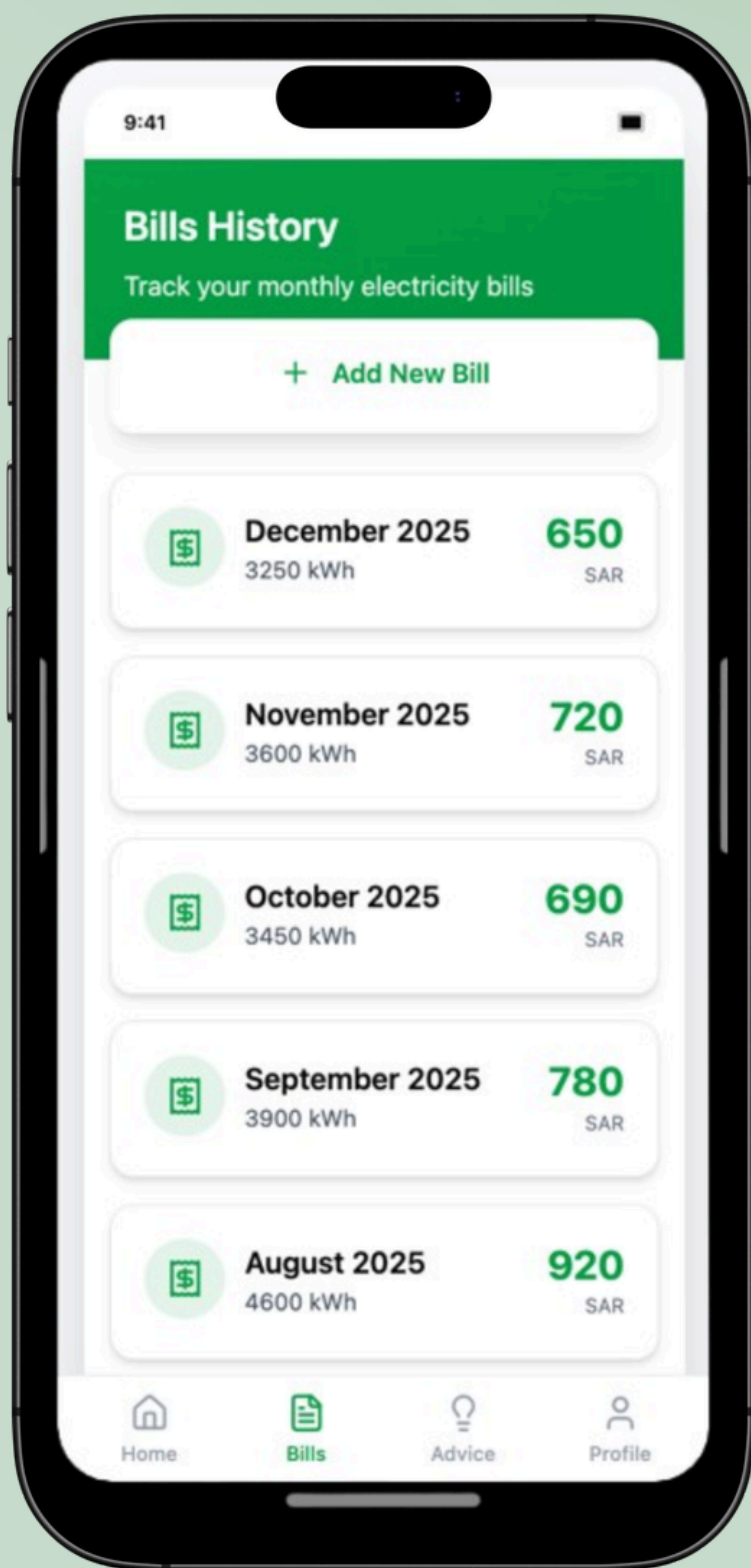

EcoWatt

Prototype Walkthrough

Our Promise in Action

Across every screen, **Ecowatt** delivers what **Alkahraba** doesn't:

What **Alkahraba** Offers:

- Basic consumption monitoring
- General energy tips
- Bill payment
- Account management

What **Ecowatt** Adds:

- AI powered analysis with savings estimates
- Personalized recommendations based on your home
- Progress tracking and motivation
- Visual proof that your actions work

Ecowatt: Your personal energy coach
